DEPLOYMENT AND AUTHORIZATION

Product Deployment

UPDF offers various deployment modes tailored to either external Internet or internal LAN environments, ensuring compatibility with enterprises' heightened security needs, particularly for privatized internal LAN deployment.

Internet Environment Deployment

In enterprise IT environments where all terminals have internet connectivity, users can log in to terminals without the need for service deployment, thereby fulfilling enterprise needs for seamless office operations.

LAN Environment Deployment

If certain or all terminal devices within an enterprise cannot connect to the internet, UPDF offers private LAN deployment options to align with enterprise security management standards.

Deployment configuration

Private Deployment: 4G network, 8-core processor

System Requirements: Windows 7 or later | macOS 10.14.6 or later | iOS 14.0 or later | Android 6.0 or later

Account Authorization Options

Enterprise License

Corporate common account

Ideal for small and micro-enterprises, organizations, or departments with a limited number of accounts and a stable user base. Enterprise account administrators have the flexibility to assign or revoke team authorizations manually.

Enterprise Floating License

Enterprise smart account

Ideal for small and medium-sized enterprises or organizations with a fluctuating user base and varying usage frequencies. All enterprise employees can register accounts, with the only limitation being the number of concurrent online accounts allowed.

Enterprise Site License

Enterprise organization account

Ideal for large organizations or businesses with extensive user bases, it enables companies to enroll divisions, subsidiaries, or partners in the licensing program without geographical limitations.
